

# Introduction to Hyper-V on Windows 10

If you are a software developer, an IT professional, or a technology enthusiast, many of you need to run multiple operating systems. Then Hyper-v, comes here to help you to run multiple operating system as virtual machine on windows.

## Installation of Hyper-V on Windows 10

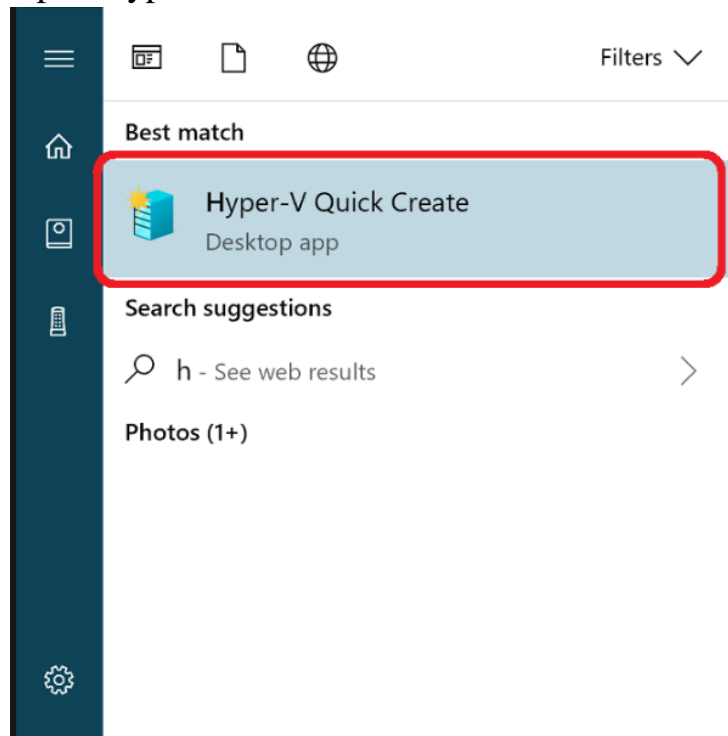

1. Click on windows and search Turn windows features ON or OFF.

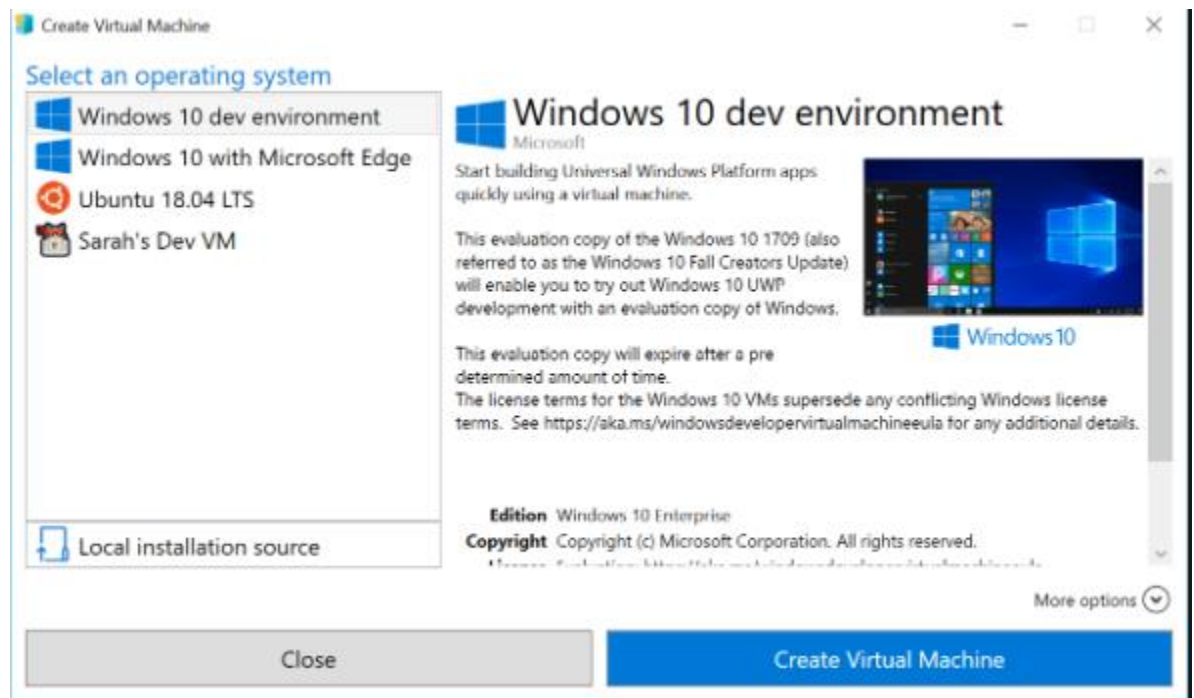

You will see this and after that you have to check on Hyper-V, it will check system requirements and ready to use on your device. After that, it will force you to restart your PC so that it can perform efficiently.

## 2. Create your virtual machine with Hyper-V

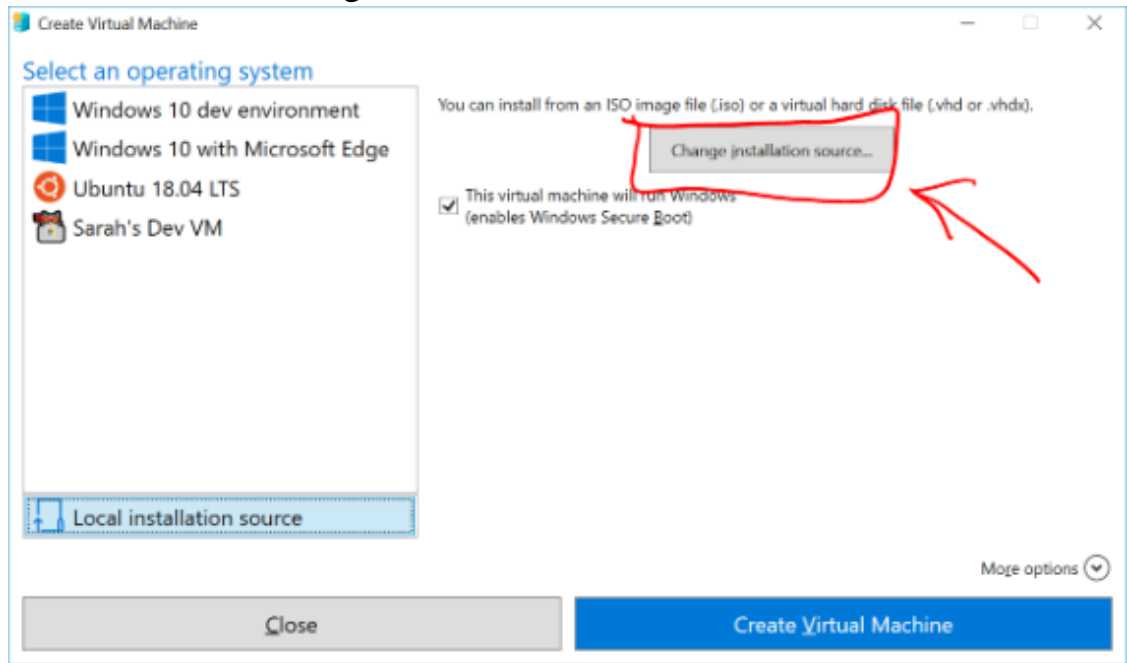

- Open Hyper-V create from the start menu

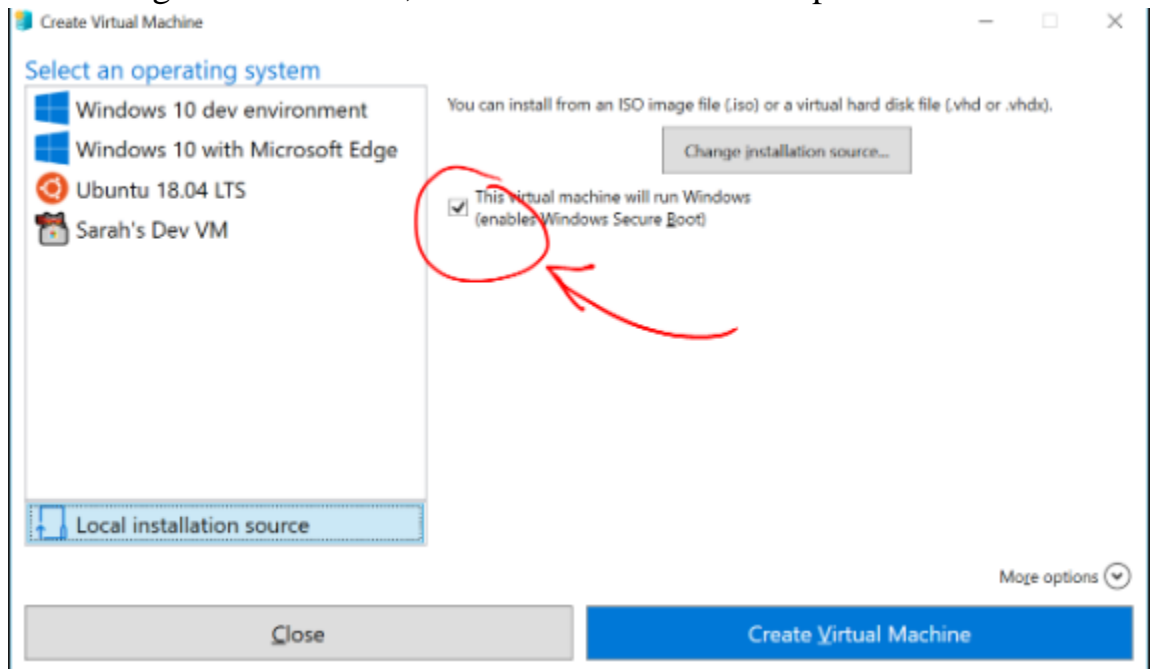

- Now you have to select operating system or choose your own by using a local file sources.

- If you want to install your own OS to create virtual machine, select Local installation source.
- After then, select change installation sources.

- If the image is a Linux OS, deselect the secure Boot option.

- Then, Select Create Virtual Machine.
